

Record Individual Infant Menus

Last Modified on 06/23/2023 3:22 pm
CDT

If individual infant menu recording is enabled for your center, you can record individual infant menus on the Attendance & Meal Count page. If you have already recorded an infant menu on the Daily Menu page, this menu is used as the default for all infants, and you can make adjustments here. Watch the video to see how it works, and scroll down for step-by-step instructions!

If you are recording the first infant menu of the day from the Attendance & Meal Count page, this menu will become the default. This means that the Daily Menu page will reflect this menu for the affected day and meal, and all other infants for whom you record a meal count will already have these food components populated.

Required Permissions: You must have the **Record Attendance** permission enabled on your account to record attendance and meal counts. Also, if you are a sponsored center, your food program sponsor must enable individual infant menu reporting for you.

1. From the menu to the left, click **Menus/Attendance**.
2. Click **Attendance/Meal Counts**.
3. Make sure the correct date, classroom, and meal are selected at the top of the page.
4. Click  to record a meal count for an infant. The infant must be marked in attendance before you can access this option. The Infant Menu pop-up opens.

Infant Menu - Faulkner, William

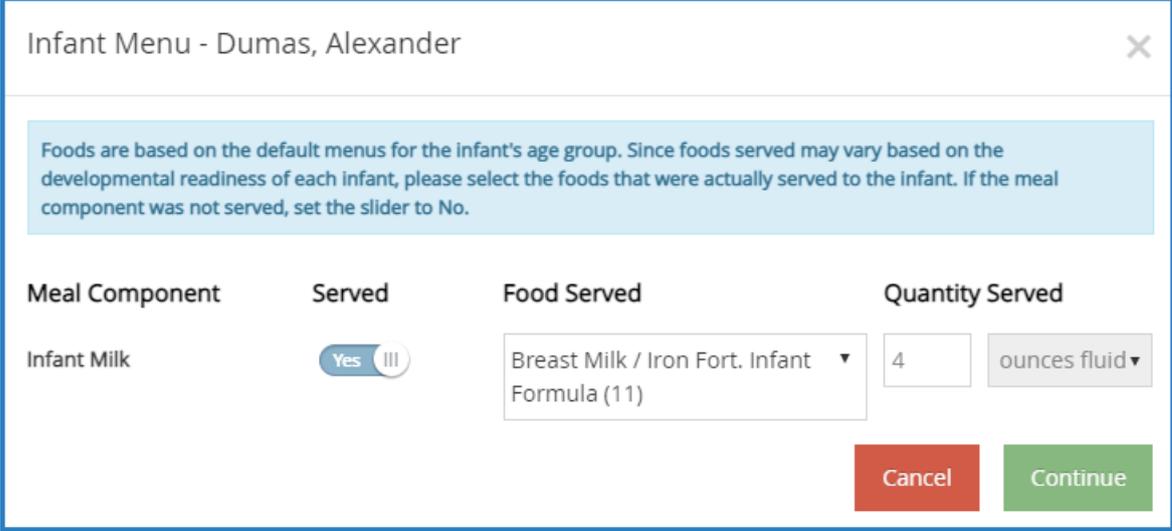

Foods are based on the default menus for the infant's age group. Since foods served may vary based on the developmental readiness of each infant, please select the foods that were actually served to the infant. If the meal component was not served, set the slider to No.

Meal Component	Served	Food Served	Quantity Served	
Infant Milk	<input checked="" type="checkbox"/>	Breast Milk / Iron Fort. Infant Formula (11)	0	<input type="text"/>
Infant Cereal	<input checked="" type="checkbox"/>	Iron Fortified Infant Cereal (542)	0	<input type="text"/>
Meat/Alternate	<input type="checkbox"/>			
Vegetables	<input type="checkbox"/>			
Fruit	<input checked="" type="checkbox"/>	Applesauce (002)	0	<input type="text"/>

5. If the infant is served something outside of the default menu (if one exists), follow the steps below. If the infant is served the default menu, go to **Step 6**.

- a. Click  next to each food component to enable or disable for this infant.
 - b. Click the **Food Served** drop-down menu to select the food this infant is eating.
6. If you are required to record quantities served, use the **Quantity Served** boxes to enter the amount served to this infant.

Note: If the infant is being served the default menu and the unit of measure used for recording quantities has already been set, you cannot change the unit used. For example, if the default menu has quantities recorded in tablespoons, you cannot switch the quantity to ounces. This ensures that KidKare can accurately calculate the quantities served for the default menu. The figure below shows the locked quantity for an infant in the 0-5 months age group.

Infant Menu - Dumas, Alexander

Foods are based on the default menus for the infant's age group. Since foods served may vary based on the developmental readiness of each infant, please select the foods that were actually served to the infant. If the meal component was not served, set the slider to No.

Meal Component	Served	Food Served	Quantity Served
Infant Milk	Yes 	Breast Milk / Iron Fort. Infant Formula (11)	4 ounces fluid
